(SPECIFIC LEGACY SUPPORT SOLUTIONS HAVE BEEN IMPLEMENTED AND WILL CONTINUE TO AS THE YEAR PROGRESSES)

BAE Systems and Ryder Logistics partner to reduce freight costs and improve service.

BAE Systems, Inc. has signed a logistics agreement beginning March 18, 2013 with Ryder that fundamentally changes the way freight will be managed. The change will reduce freight costs, improve transportation planning, increase shipment visibility and more clearly define shipping and routing instructions. The agreement covers full and partial truckloads, heavyweight air and expedited freight requirements where BAE Systems is responsible for freight expense.

Rather than contacting a carrier directly to pick up freight, suppliers will be directed to use Ryder On-Line at www.ryder.com to request service. First time users and users with technical or system problems can contact them directly at **BAE@Ryder.com** or **1-855-RyderBAE (1-855-793-3722)**. From this single Portal, suppliers will be able to schedule pick-up and print shipping documents that will be compliant to BAE Systems needs.

With more than 480 clients including such companies as Northrop Grumman and Boeing, Ryder has a comprehensive suite of logistics and transportation network optimization capabilities to move BAE Systems freight in a timely and efficiently manner to meet our business requirements.
