Quality Notice

Chemical Agent Resistant Coatings (CARC) Applicators and Suppliers

Subject: Clarification of the Solvent Wipe Test IAW MIL-DTL-53072E

BAE Systems received a letter from our customer regarding the test requirements for the solvent wipe testing and the length of time required before applying the test.

Our customer has recognized that the wait time of 168 hours to start the test is not always practical and has defined a shorter duration of 72 hours minimum of air dry prior to the start of the test. They further define the test parameters and actions to be taken if the test results do not meet all of the requirements at the 72 hour time limit.

Please take the time to review the attached letter from our customer and apply to your paint process as necessary to meet your delivery requirements.

Thank you,

Tom Frazho
